

MA. VICTORIA C. NARTE

nartevictoria@gmail.com | +639678029853 | C. Molina St., Veinte Reales, Valenzuela City

EDUCATION

Bachelor of Science in Computer Science

September 2024 – Present

Polytechnic University of the Philippines

- Relevant Coursework: Object Oriented Programming, Information Management, Data Structures and Algorithm, Design and Analysis of Algorithm, Data Communications and Networking, Operating Systems
- Awards: President Lister

2024 - Present

SKILLS

- **Programming Languages:** C, Java, Python, SQL, JavaScript/TypeScript
- **Web Development:** HTML, CSS, React, Next.js, REST APIs
- **Backend & Databases:** Firebase Firestore, Supabase PostgreSQL, Prisma
- **APIs & AI:** Google Maps API, Hugging Face Inference API, AI Prompting, Retrieval & Grounding, AI Evaluation
- **DevOps:** Git, GitHub, CI/CD, Docker
- **Tools:** Cisco Packet Tracer, Firebase Studio, Google Cloud Console, Visual Studio Code

EXPERIENCE

Backend AI Engineering Intern

July 2026 - August 2026

Flyrank AI

- Designed and reviewed API contracts, including endpoints, payloads, status states, and error-handling requirements for AI backend workflows.
- Developed structured AI tasks through prompt design, input/output constraints, schemas, and success criteria.
- Worked with retrieval and grounding concepts to improve the reliability and source support of AI-generated outputs.
- Contributed to evaluation and operations through quality rubrics, failure-mode analysis, verification, and documentation of potential production considerations.

Assistant Executive Secretary

2025 - 2026

PUP Association of Students for Computer Intelligence Integration (PUP ASCII)

- Coordinated comprehensive testing and validation protocols, ensuring strict compliance with industry standards.
- Provided technical expertise during system reviews, contributing to a 15% reduction in mechanical and system failures.

PROJECTS

Sintang Iskolar Database | Python · Flask · SQL · Vercel ([see it here](#))

- Developed a scholarship database web application for managing and organizing scholar information.
- Designed and implemented a SQL database schema to structure and manage scholarship-related records.
- Developed backend functionality using Python and Flask for database operations and application workflows.
- Implemented database initialization, inspection, and update utilities to support data management and maintenance.
- Added database testing and configured the application for Vercel deployment.

Ligtas-Larga | Next.js · React · TypeScript · Supabase PostgreSQL · Prisma · Google Maps API · Hugging Face ([see it here](#))

- Designed and developed user-facing interfaces for a mobile-first crowdsourced navigation platform focused on accessibility hazards and environmental issues in Metro Manila.
- Contributed to an accessibility-focused navigation experience with real-time hazard reporting, dynamic routing, commuter profiles, and location-based navigation.
- Worked with Next.js and React to build responsive interfaces and interactive map components.
- Integrated UI flows with mapping, routing, authentication, and AI-powered image verification services.

Botika Finder | React · TypeScript · Vite · Supabase · Vercel ([see it here](#))

- Developed a web-based pharmacy locator to help users find and access nearby botika and pharmacy services.
- Built responsive and interactive components using React and TypeScript.
- Integrated Supabase for backend data management and application functionality.
- Applied algorithmic problem-solving techniques to efficiently organize and present pharmacy information.
- Deployed the application as a live web application using Vercel.

Automated Linear System Solver | Python · HTML · CSS · JavaScript ([see it here](#))

- Developed a web-based application that automates the process of solving systems of linear equations.
- Implemented algorithms for processing coefficient matrices and calculating solutions to linear systems.
- Designed an interactive interface for users to input equations and receive computed solutions.
- Translated linear algebra concepts and solution methods into functional computational algorithms.
